**Subject:** Subsistence Testing and Aleutian Island Risk Assessment

Good Afternoon,

During our dispersant hub meeting I mentioned two different topics that were of interest to you. The first was the subsistence testing that was conducted during the Selendang Ayu spill response. I have attached a report that gives a summary of the testing that was conducted and the involvement of local tribes. The process used for this case has also been used for a few other small cases and is considered to be a good example of what we should do in future spill responses. The second topic was the Aleutian Island Risk Assessment. This is an ongoing assessment of the risk posed by maritime transportation in the Aleutians. There are a number of different topics that are being covered by this risk assessment but all of them are looking at preventing future vessel accidents and ways to improve response capabilities. The best information about the risk assessment can be found at <http://www.aleutiansriskassessment.com/> . If you have any further questions on either of these topics please feel free to contact me.

Thanks,  
Crystal Smith
